

# Linux Process Management

**Bok, JongSoon**  
**javaexpert@nate.com**  
**<https://github.com/swacademy/fss/tree/main/Linux>**

# Program in Linux

- Refers to a set of instructions or code designed to perform a specific task or set of tasks on a computer.
- Key aspects
  - Open Source
  - Command-Line Interface(CLI) Programs
  - Graphical User Interface(GUI) Programs
  - Package Management
  - Compatibility
  - Variety of Applications
  - Community Support
- Kinds
  - System Programs
  - Application Programs

# Program in Linux (Cont.)

- Refers to any piece of software that can be executed.
- Includes
  - Executable Binaries
  - Scripts
  - Applications
  - System Daemons and Services
- Can install programs from package managers like *apt* (for Debian-based systems) or *yum* (for Red Hat-based systems), compile them from source, or run them as scripts.

# PATH

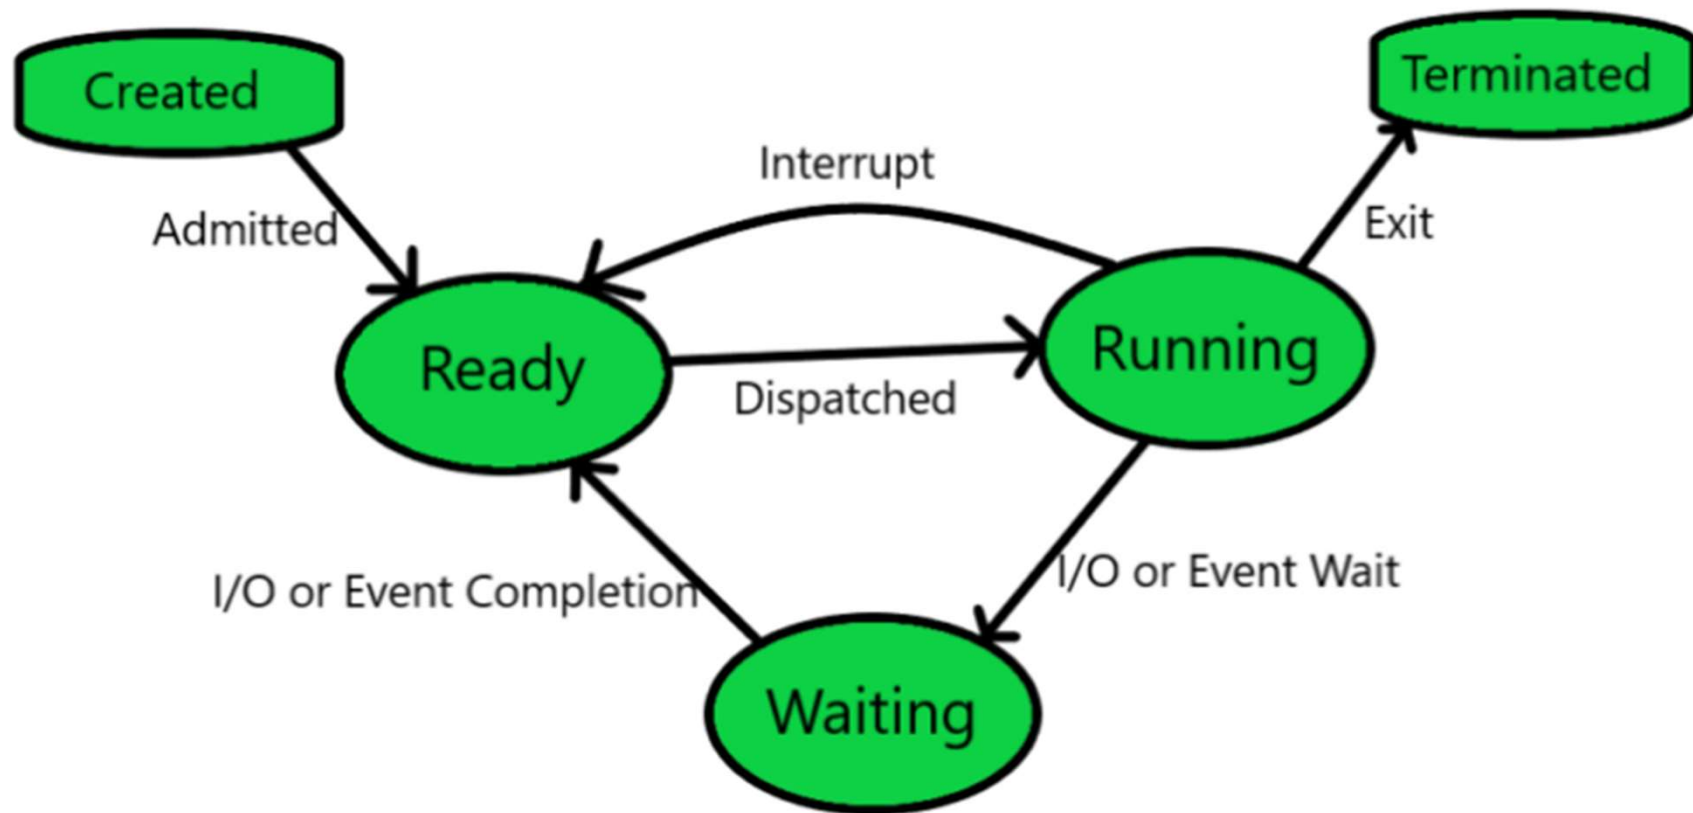

- Way to search programs
  - `$ echo $PATH`
- When the command is executed, the system does the following:
  - Find specified path
  - Search the *\$PATH* variable for program

```
ubuntu@ubuntu-desktop:~$ echo $PATH
/usr/local/sbin:/usr/local/bin:/usr/sbin:/usr/bin:/sbin:/bin:/usr/games:/usr/local/games:/snap/bin
ubuntu@ubuntu-desktop:~$
```

# Process

- Is a fundamental concept representing a running instance of a program.
- When start a program on a Linux system, it becomes a process.
- Each process in Linux has a unique identifier called a Process ID (*PID*) and contains the program's executable code, its current activity (or *state*), and the resources assigned to it.
- Key aspects
  - Process ID (PID)
  - Parent and Child Processes
  - Process State
  - Resources
  - Execution Context
  - Environment
  - Priority and Scheduling
  - System Calls and User Space

# Process state

# Process management

# ps Command

- Is a standard utility used to display information about the currently running processes on a system.
- Stands for *p*rocess *s*tatus.
- Is widely used for monitoring the system's processes
- Is an essential tool for system administration and troubleshooting.
- Provides various details about
  - PID
  - TTY
  - TIME
  - CMD
  - USER
  - %CPU, %MEM

```
ubuntu@ubuntu-desktop:~$ ps
  PID TTY          TIME CMD
 14305 pts/2        00:00:01 bash
 19639 pts/2        00:00:00 ps
ubuntu@ubuntu-desktop:~$
```

# ps Command (Cont.)

## ■ Options and Flags

- **-e** or **-A** : List all processes
- **-f** : Show processes in a hierarchical format
- **-u [username]** : Display processes for a specific user
- **aux** : Combining multiple flags
  - **a** : Show processes for all users
  - **u** : Display the process's user/owner
  - **x** : Include processes not attached to a terminal
- **-p [PID]** : Selecting processes by PID

## ■ Piping with *grep*

- To find a specific process, can pipe the output of **ps** into **grep**  
**\$ ps aux | grep [processName]**

# pidof Command

- Is a simple utility used to find the process ID (PID) of a running program.
- Syntax
  - `$ pidof [programName]`
- Example
  - `$ pidof apache2`

```
ubuntu@ubuntu-desktop:~$ pidof sshd
14304 14268 14257 14221 13977
ubuntu@ubuntu-desktop:~$
```

# pstree Command

- Is a useful tool for displaying the process hierarchy, showing how processes are related to each other in a tree structure.

```
systemd—VBoxService——7*[{VBoxService}]
      |
      |—accounts-daemon——2*[{accounts-daemon}]
      |
      |—2*[agetty]
      |
      |—atd
      |
      |—cron
      |
      |—dbus-daemon
      |
      |—irqbalance——{irqbalance}
      |
      |—2*[iscsid]
      |
      |—lvmetad
      |
      |—lxcfs——2*[{lxcfs}]
      |
      |—networkd-dispat——{networkd-dispat}
      |
      |—nginx——2*[nginx]
      |
      ...
```

# top Command

- Is a real-time system monitor that provides a dynamic view of running processes and system resource usage.

```
top - 14:05:08 up 1 min, 1 user, load average: 2.56, 1.69, 0.67
Tasks: 281 total, 1 running, 280 sleeping, 0 stopped, 0 zombie
%Cpu(s): 8.8 us, 3.0 sy, 0.0 ni, 88.2 id, 0.0 wa, 0.0 hi, 0.0 si, 0.0 st
MiB Mem : 3928.7 total, 499.8 free, 1481.0 used, 1948.0 buff/cache
MiB Swap: 2048.0 total, 2048.0 free, 0.0 used. 2197.6 avail Mem
```

PID	USER	PR	NI	VIRT	RES	SHR	S	%CPU	%MEM	TIME+	COMMAND

# top Command (Cont.)

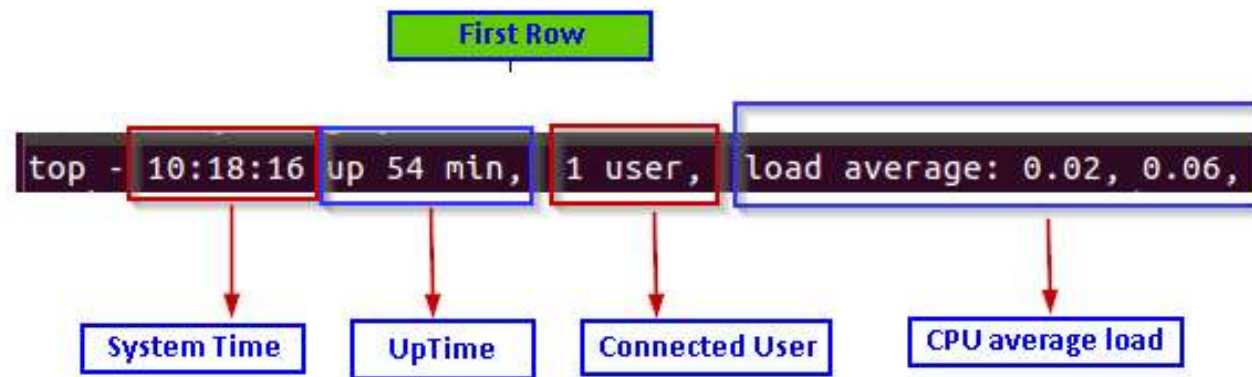

## ■ Options

- **-h** or **help**
- **-v** or **version**
- **-b** : Runs in batch mode, useful for sending output to a file or another program.

```
ubuntu@ubuntu-desktop:~/CompanyA$ top -hv
procps-ng 3.3.17
Usage:
top -hv | -bcEeHiOSs1 -d secs -n max -u|U user -p pid(s) -o field -w [cols]
ubuntu@ubuntu-desktop:~/CompanyA$
```

# top Command (Cont.)

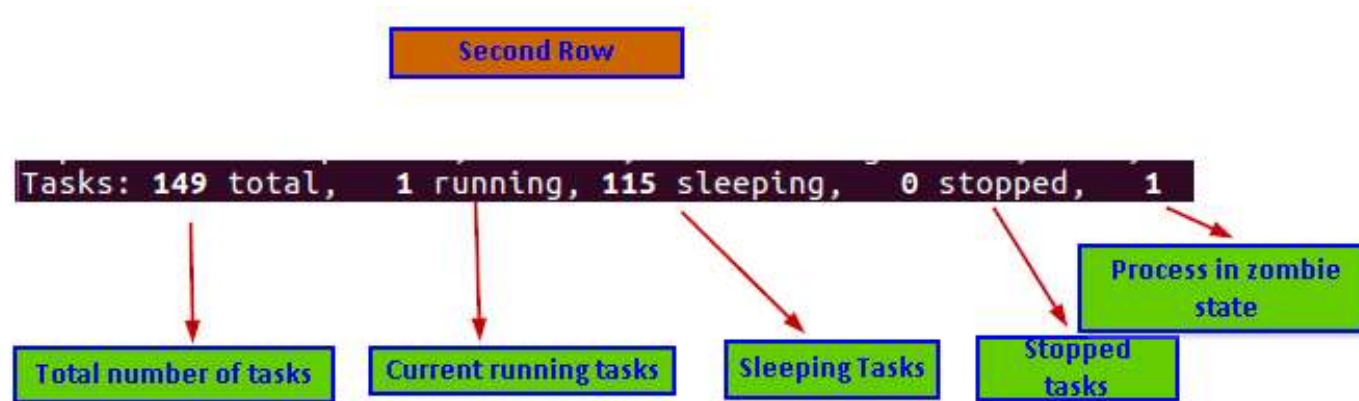

## ■ First Row

- Current system time (10:18:16)
- Uptime of the system(up 54 min)
- Count of logged in users (1 user)
- Average CPU load (load average: 0.02, 0.06) : 0.02 in last minute and 0.06 in last five minutes.

# top Command (Cont.)

## ■ Second Row

- Total number of tasks
- A number of currently running tasks
- A total number of tasks in a sleeping state
- Total number of stopped tasks
- A total number of processes in a zombie state

# top Task state

## ■ R(Running)

- The process is either running or ready to run.

## ■ S(Sleeping)

- The process is sleeping, waiting for an event or resource.

## ■ D(Uninterruptible Sleep)

- Waiting for I/O completion, cannot be interrupted.

## ■ Z(Zombie)

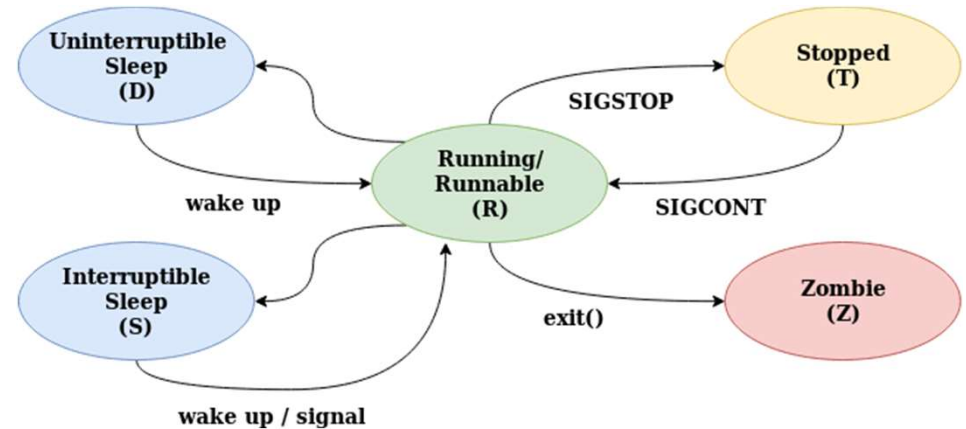

- Completed process, awaiting collection by its parent.

## ■ T(Stopped)

- Process has been stopped, typically by a job control signal.

## ■ t(Tracing Stop)

- Process is stopped by a debugger during tracing.

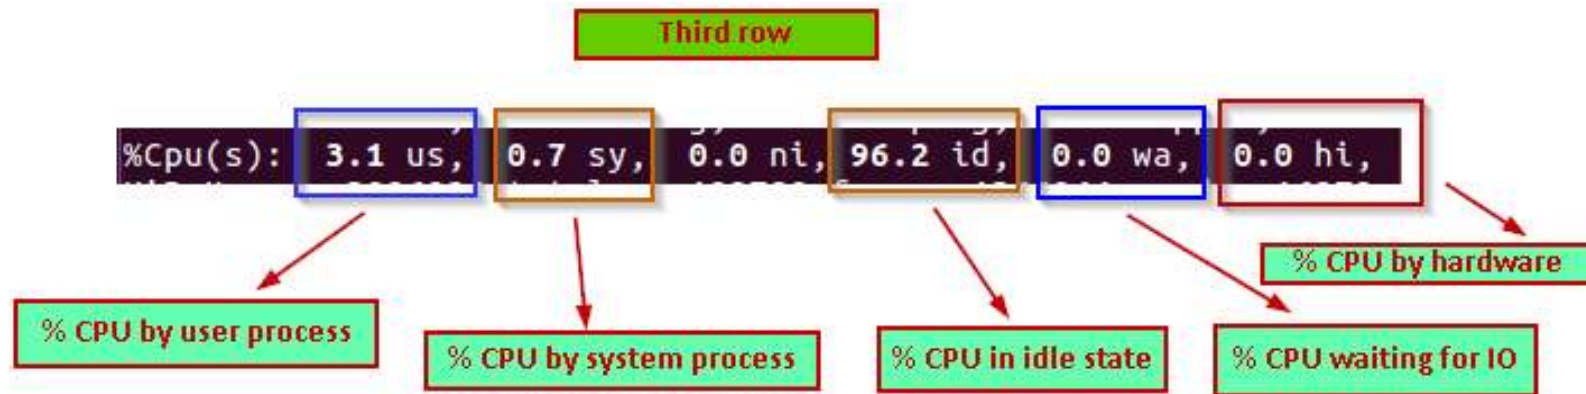

```
top - 20:12:28 up 3:13, 1 user, load average: 0.00, 0.00, 0.00
Tasks: 90 total, 1 running, 49 sleeping, 0 stopped, 0 zombie
%Cpu(s): 0.2 us, 0.2 sy, 0.0 ni, 99.3 id, 0.0 wa, 0.0 hi, 0.0 si, 0.3 st
KiB Mem : 3977796 total, 3359996 free, 122140 used, 495660 buff/cache
KiB Swap: 0 total, 0 free, 0 used. 3634520 avail Mem
```

# top Command (Cont.)

## ■ Third Row

- 3.1 us % CPU used by the user processes
- 0.7 sy % CPU used by the system processes
- 96.2 id % CPU by in idle state
- 0.0 wa % CPU waiting for IO
- 0.0 hi % CPU time by hardware interrupts

# top CPU value

Value	Description
<i>us</i> (User Time)	Time CPU spends executing processes in user mode.
<i>sy</i> (System Time)	Time spent on system/kernel tasks.
<i>ni</i> (Nice Time)	Time spent on user processes with a positive nice value.
<i>id</i> (Idle Time)	CPU time when no tasks are running.
<i>wa</i> (I/O Wait)	Time waiting for I/O operations to complete.
<i>hi</i> (Hardware Interrupts)	Time dealing with hardware interrupts.
<i>si</i> (Software Interrupts)	Time handling software interrupts.
<i>st</i> (Steal Time)	Time that a virtual CPU waits for a real CPU (in virtualized environments).

```
top - 20:12:28 up 3:13, 1 user, load average: 0.00, 0.00, 0.00
Tasks: 90 total, 1 running, 49 sleeping, 0 stopped, 0 zombie
%Cpu(s): 0.2 us, 0.2 sy, 0.0 ni, 99.3 id, 0.0 wa, 0.0 hi, 0.0 si, 0.3 st
KiB Mem : 3977796 total, 3359996 free, 122140 used, 495660 buff/cache
KiB Swap: 0 total, 0 free, 0 used. 3634520 avail Mem
```

# top Command (Cont.)

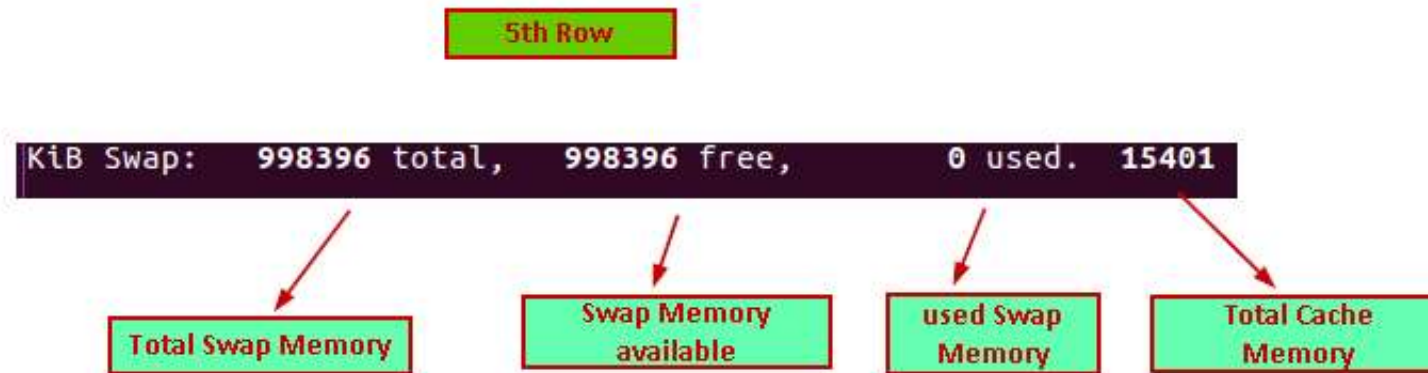

## ■ Fourth Row

- 3096024 total: Total system memory in KB
- 96564 free: Available memory in KB
- 370404 used: Used memory in KB
- 16290: Memory used by the buffer cache in KB

## top Command (Cont.)

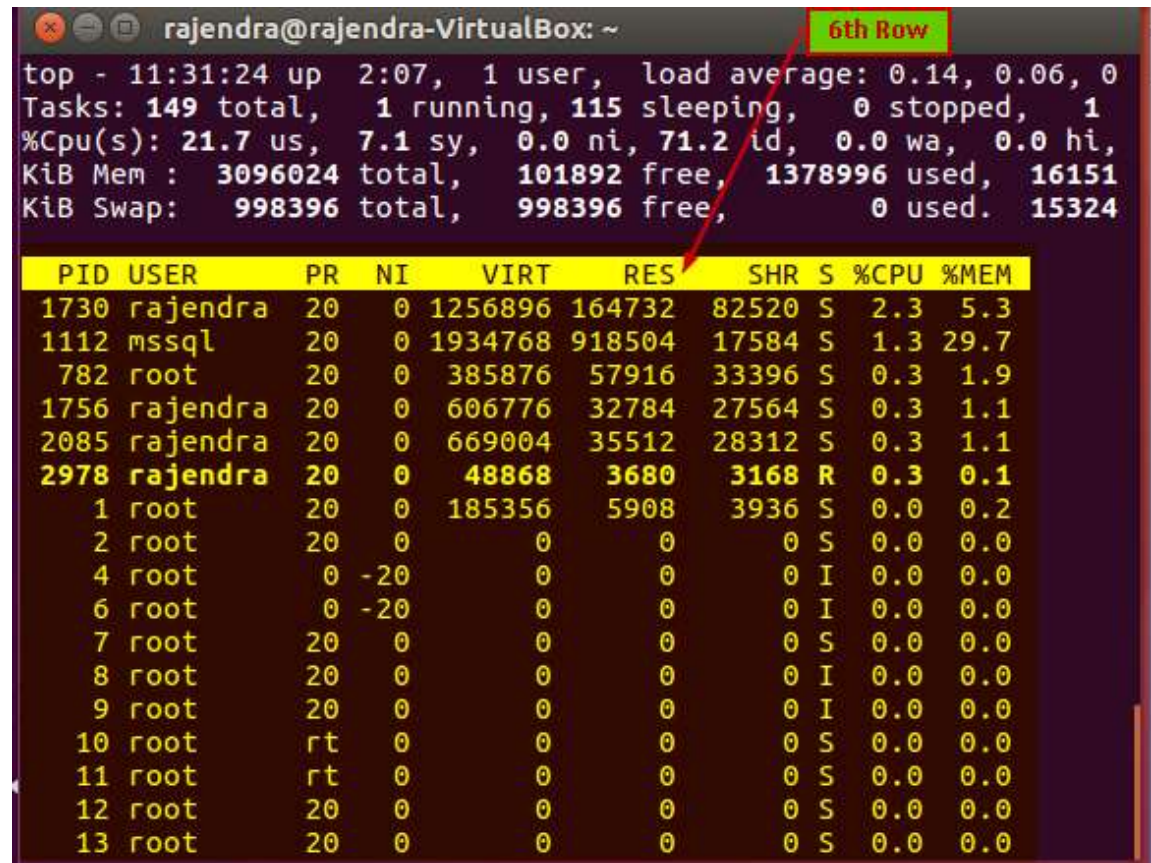

### ■ Fifth Row

- 998396 total: Total swap memory in KB
- 988396 free: Available swap memory in KB
- 0 used: Currently used swap memory in KB
- 15401: Total Cache memory

## top Command (Cont.)

### ■ Sixth Row

rajendra@rajendra-VirtualBox: ~

top - 11:31:24 up 2:07, 1 user, load average: 0.14, 0.06, 0  
Tasks: 149 total, 1 running, 115 sleeping, 0 stopped, 1  
%Cpu(s): 21.7 us, 7.1 sy, 0.0 ni, 71.2 id, 0.0 wa, 0.0 hi,  
KiB Mem : 3096024 total, 101892 free, 1378996 used, 16151  
KiB Swap: 998396 total, 998396 free, 0 used. 15324

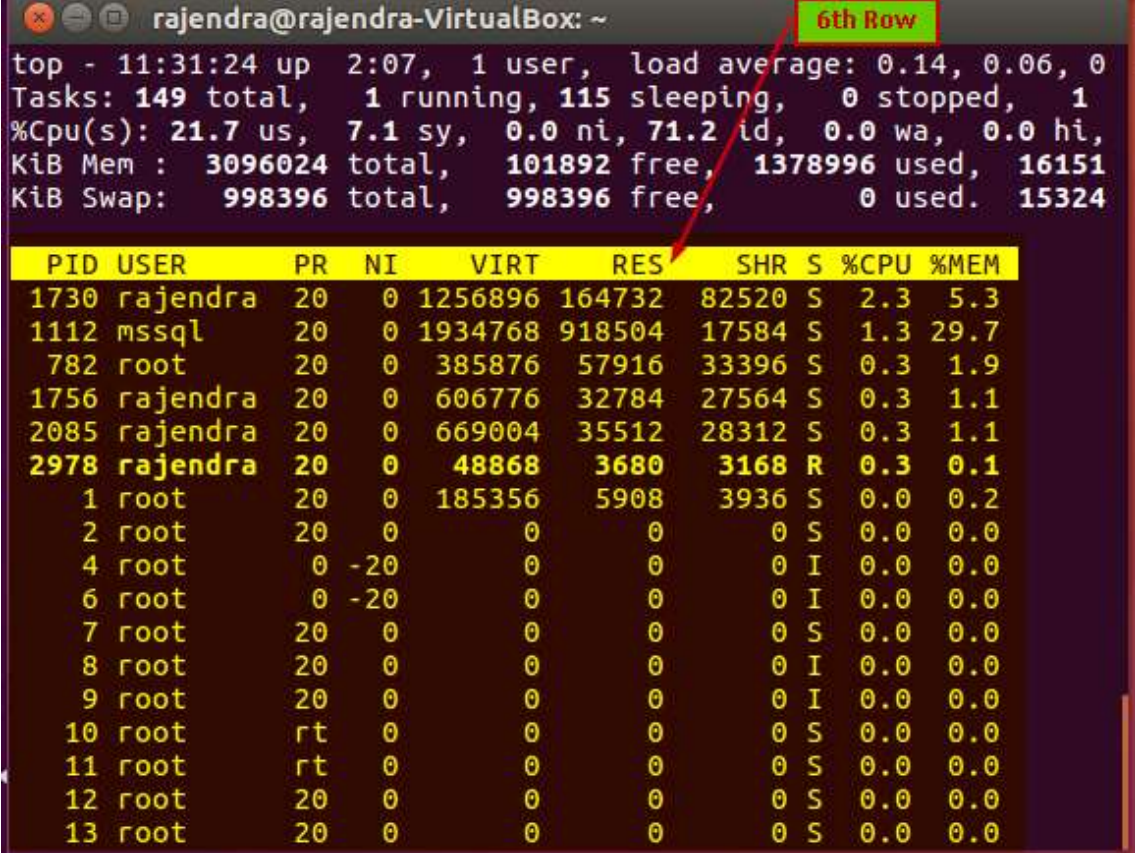

PID	USER	PR	NI	VIRT	RES	SHR	S	%CPU	%MEM
1730	rajendra	20	0	1256896	164732	82520	S	2.3	5.3
1112	mssql	20	0	1934768	918504	17584	S	1.3	29.7
782	root	20	0	385876	57916	33396	S	0.3	1.9
1756	rajendra	20	0	606776	32784	27564	S	0.3	1.1
2085	rajendra	20	0	669004	35512	28312	S	0.3	1.1
2978	rajendra	20	0	48868	3680	3168	R	0.3	0.1
1	root	20	0	185356	5908	3936	S	0.0	0.2
2	root	20	0	0	0	0	S	0.0	0.0
4	root	0	-20	0	0	0	I	0.0	0.0
6	root	0	-20	0	0	0	I	0.0	0.0
7	root	20	0	0	0	0	S	0.0	0.0
8	root	20	0	0	0	0	I	0.0	0.0
9	root	20	0	0	0	0	I	0.0	0.0
10	root	rt	0	0	0	0	S	0.0	0.0
11	root	rt	0	0	0	0	S	0.0	0.0
12	root	20	0	0	0	0	S	0.0	0.0
13	root	20	0	0	0	0	S	0.0	0.0

- **PID:** this is the process id of the running process
- **User:** It is the user id for which the process is running
- **PR:** it is the process priority. We can see value 'rt' in this column as well. RT means the process is running real-time

## top Command (Cont.)

### ■ Sixth Row (Cont.)

rajendra@rajendra-VirtualBox: ~

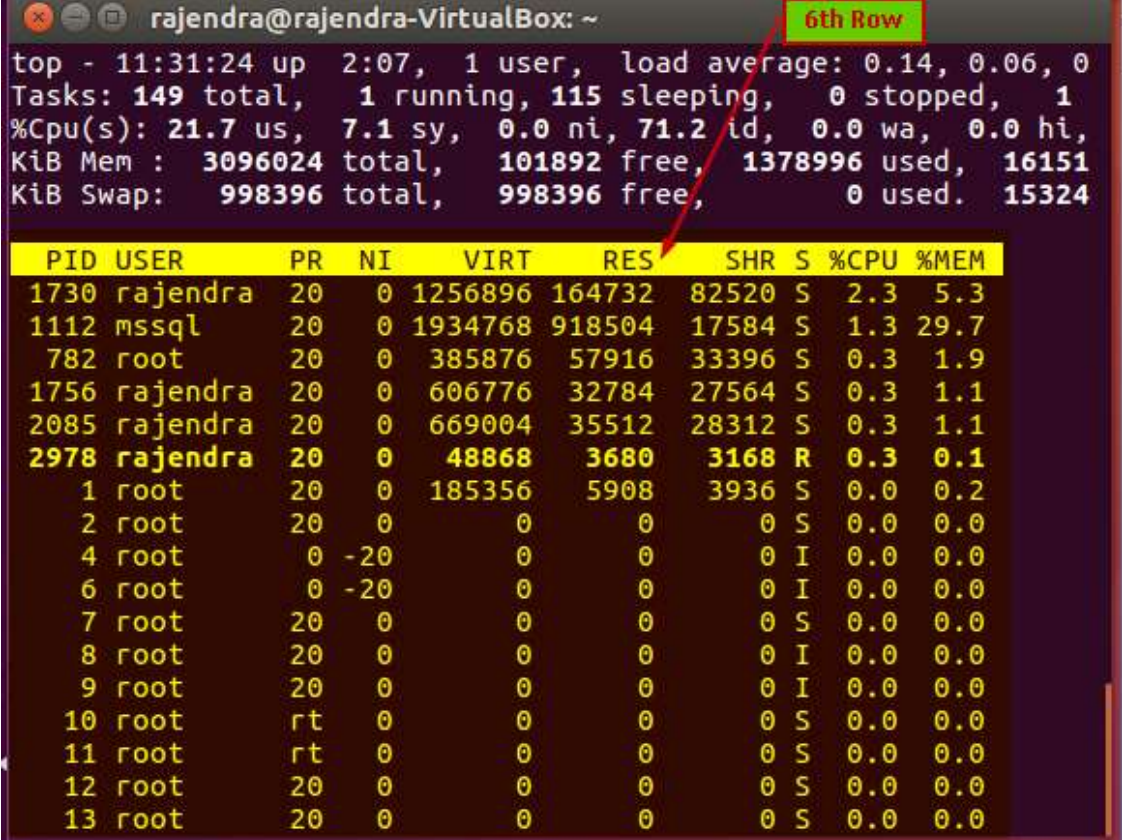

top - 11:31:24 up 2:07, 1 user, load average: 0.14, 0.06, 0  
Tasks: 149 total, 1 running, 115 sleeping, 0 stopped, 1  
%Cpu(s): 21.7 us, 7.1 sy, 0.0 ni, 71.2 id, 0.0 wa, 0.0 hi,  
KiB Mem : 3096024 total, 101892 free, 1378996 used, 16151  
KiB Swap: 998396 total, 998396 free, 0 used. 15324

PID	USER	PR	NI	VIRT	RES	SHR	S	%CPU	%MEM
1730	rajendra	20	0	1256896	164732	82520	S	2.3	5.3
1112	mssql	20	0	1934768	918504	17584	S	1.3	29.7
782	root	20	0	385876	57916	33396	S	0.3	1.9
1756	rajendra	20	0	606776	32784	27564	S	0.3	1.1
2085	rajendra	20	0	669004	35512	28312	S	0.3	1.1
2978	rajendra	20	0	48868	3680	3168	R	0.3	0.1
1	root	20	0	185356	5908	3936	S	0.0	0.2
2	root	20	0	0	0	0	S	0.0	0.0
4	root	0	-20	0	0	0	I	0.0	0.0
6	root	0	-20	0	0	0	I	0.0	0.0
7	root	20	0	0	0	0	S	0.0	0.0
8	root	20	0	0	0	0	I	0.0	0.0
9	root	20	0	0	0	0	I	0.0	0.0
10	root	rt	0	0	0	0	S	0.0	0.0
11	root	rt	0	0	0	0	S	0.0	0.0
12	root	20	0	0	0	0	S	0.0	0.0
13	root	20	0	0	0	0	S	0.0	0.0

- **Ni**: It is the nice value of the process running. The negative value on this column shows high priority. Nice value range is -20 to 19 in which -20 is the highest and 19 lowest value
- **VIRT**: It is the virtual memory in KB used the process
- **RES**: it is the physical memory in KB used by that particular process

## top Command (Cont.)

### ■ Sixth Row (Cont.)

rajendra@rajendra-VirtualBox: ~

top - 11:31:24 up 2:07, 1 user, load average: 0.14, 0.06, 0  
Tasks: 149 total, 1 running, 115 sleeping, 0 stopped, 1

12	root	20	0	0	0	0	S	0.0	0.0
13	root	20	0	0	0	0	S	0.0	0.0

- **SHR**: it is the shared memory used by the process in KB
- **S**: it defines process status(S- Sleeping, R- running, I- idle, Z-Zombie)
- **%CPU**: % CPU used by the process
- **%MEM**: % memory used by the process

## top Command (Cont.)

### ■ Sixth Row (Cont.)

The diagram illustrates the fields of the `top` command's sixth row. A central table shows the data for process 1730. Red arrows point from descriptive labels in green boxes to the specific columns in the table. The labels are: Process Table (points to the entire row), Shared Memory (points to SHR), Status (points to S), % CPU (points to %CPU), Process ID (points to PID), UserID (points to USER), Priority (points to PR), Nice Value (points to NI), Virtual memory KB (points to VIRT), Physical Memory (points to RES), and % Memory (points to %MEM).

PID	USER	PR	NI	VIRT	RES	SHR	S	%CPU	%MEM
1730	rajendra	20	0	1250548	158300	82520	S	1.3	5.1

# kill Command

- Sends signals to processes, primarily used to terminate processes.
- By default, it sends *SIGTERM* (signal 15), asking a process to stop gracefully.
- If unresponsive, *SIGKILL* (signal 9) forcefully terminates it.
- Usage
  - `$ kill [signal_option] [PID]`

## Options

- `-9` for *SIGKILL*
- `-15` for *SIGTERM*

```
jayesh@jayesh-VirtualBox:~$ kill -l
1) SIGHUP      2) SIGINT      3) SIGQUIT     4) SIGILL      5) SIGTRAP
6) SIGABRT     7) SIGBUS      8) SIGFPE      9) SIGKILL     10) SIGUSR1
11) SIGSEGV    12) SIGUSR2    13) SIGPIPE     14) SIGALRM     15) SIGTERM
16) SIGSTKFLT  17) SIGCHLD    18) SIGCONT     19) SIGSTOP     20) SIGTSTP
21) SIGTTIN    22) SIGTTOU    23) SIGURG      24) SIGXCPU     25) SIGXFSZ
26) SIGVTALRM  27) SIGPROF    28) SIGWINCH    29) SIGIO        30) SIGPWR
31) SIGSYS     34) SIGRTMIN   35) SIGRTMIN+1  36) SIGRTMIN+2  37) SIGRTMIN+3
38) SIGRTMIN+4 39) SIGRTMIN+5 40) SIGRTMIN+6 41) SIGRTMIN+7 42) SIGRTMIN+8
43) SIGRTMIN+9 44) SIGRTMIN+10 45) SIGRTMIN+11 46) SIGRTMIN+12 47) SIGRTMIN+13
48) SIGRTMIN+14 49) SIGRTMIN+15 50) SIGRTMAX-14 51) SIGRTMAX-13 52) SIGRTMAX-12
53) SIGRTMAX-11 54) SIGRTMAX-10 55) SIGRTMAX-9  56) SIGRTMAX-8  57) SIGRTMAX-7
58) SIGRTMAX-6 59) SIGRTMAX-5 60) SIGRTMAX-4 61) SIGRTMAX-3 62) SIGRTMAX-2
63) SIGRTMAX-1 64) SIGRTMAX
jayesh@jayesh-VirtualBox:~$
```

# nice & renice Command

- Are used to adjust the scheduling priority of processes.

- nice

- Sets the priority of a new process.
- A higher nice value means a lower priority, and the range typically goes from **-20** (highest priority) to **19** (lowest).
- Usage
  - `$ nice -n [nice_value] [command]`

- renice

- Alters the priority of existing processes.
- It requires the process ID (PID) and can change the nice value of a process that's *already running*.
- Usage
  - `$ renice [nice_value] -p [PID]`

# jobs Command

- Is used to display the status of jobs in the current shell session.
- what's job
  - Refers to a process that was started by the shell and can be running, stopped, or terminated.
- **jobs** shows the job ID, state (like running or stopped), and the command that initiated the job.
- Particularly useful for managing background and suspended jobs, helping users keep track of multiple processes they've initiated in their shell session.

# jobs Command (Cont.)

## ■ How to use

### ● List Jobs

- Type jobs in the terminal.
- This will display a list of current jobs with their status (running, stopped, etc.).

### ● Job Control

- Can bring a job to the foreground with `fg %[job_id]` or send it to the background with `bg %[job_id]`.

### ● Job IDs

- Jobs are referenced by their job ID, which is displayed next to each job by the jobs command.

# at Command

- Schedules commands or scripts to be executed at a later time.
- Specify the time for execution in a variety of formats, and at then runs the provided commands at that time.
- Example
  - `$ at now + 2 hours`
- How to use
  - ① Schedule a Job: Enter at followed by the time for the job. For example, `at 5pm` or `at now + 1 hour`.
  - ② Enter Commands: After pressing Enter, you'll get a prompt. Type the command(s) you want to execute.
  - ③ End Input: Press `Ctrl+D` to save the job.

# cron Command

- Is not directly used but refers to the **cron** daemon and **crontab** files that handle scheduled tasks.
- Cron jobs are tasks scheduled to run automatically at specified intervals.
- Use the **crontab** command to create, edit, list, or remove **cron** jobs.
- How to use
  - **\$ crontab -e** for edit the current user's crontab
  - **\$ crontab -l** for listing current cron jobs
- Crontab format
  - minute hour day month weekday command

## **cron** Command (Cont.)

- Crontab format
  - minute hour day month weekday command
- Minute → 0-59
- Hour → 0-23
- Day of Month → 1-31
- Month → 1-12
- Day of Week → 0-7 (both 0 and 7 are Sunday)
- Command

---

# Lab. 프로세스 관리
